ETHER BUSINESS CONTINUITY

Reimagine Backup and DR

Keep your business always-on securely and cost-effectively with Ether Backup and DR-as-a-Service.

From natural disasters to IT systems failure to cyber-attacks, business continuity is impacted in many ways. No organization is immune from it and any disruption to business directly impacts revenue and profitability. To overcome this, organizations need to have a robust backup and disaster recovery solution in place. With Ether Backup and DR-as-a-Service gain peace of mind with guaranteed recovery and uptime and meet regulatory requirements.

Backup as a Service

Safeguard your business by backing up faster to the cloud with Ether Back-up-as-a-Service. Switch to an opex model to eliminate the need for expensive on-premises hardware and protect your mission-critical data and applications within minutes.

Cyber Protect

Reduce risk by protecting every workload and gain the ability to recover instantly without losing data with Ether Cyber Protect. Accelerate security and manageability by getting a best-in-breed backup solution with customizable backup settings and flexible storage options.

Benefits

- Protect every workload
- Zero-day threats protection
- Near-zero RPO and RTO
- Flexible retention policies
- Multiple backup types
- Extended anti-malware capabilities
- Strengthened compliance

Next-Gen Data Management

Modernize your legacy backup with a simple, secure, smart, and scalable next-gen data management solution with integrated threat defense. Radically simplify enterprise data management and unlock limitless value from enterprise data with an AI-powered integrated Backup & Recovery solution.

Benefits

- Integrated cybersecurity
- Instant mass restore
- Do more with unstructured data
- Software Defined
- Unlimited Scalability
- Multiprotocol interoperability
- Hybrid/multi-cloud data management
- Supports modern workloads like big data, distributed DB and containers

DR as a Service

Enhance business resilience while reducing costs and complexity with Ether Disaster Recovery-as-a-Service. Meet RTO and RPO objectives easily with our simple and reliable failover orchestration for multi-cloud workloads and remove the complexity of maintaining business continuity.

Cloud-Based Disaster Recovery

Reduce cost and complexity with a cloud disaster recovery solution to improve business resilience. Meet RTO and RPO requirements with a simple and reliable failover orchestration of both VMware and AWS workloads and simplify cloud DR for both on-premises and cloud workloads.

Benefits

- One-click disaster recovery to the cloud
- Automated cross-region, cross-account DR for AWS
- No software or hardware requirement
- Maintain SLA compliance
- Consolidated backup and cloud disaster recovery
- Centralized visibility and management
- Mitigate the risk of ransomware

Hybrid Disaster Recovery

Proactively avoid downtime and control costs by protecting your data, applications, and systems beyond backup with a true hybrid disaster recovery solution. A universal, cost-efficient, and scalable solution combining compute, network, block, file, and object-based workloads using industry-standard hardware, it supports all use cases and workloads.

Benefits

- Improved endpoint and data protection
- No new hardware or staff required
- Meets data sovereignty requirements
- Combines virtualization with advanced software-defined storage
- Meet SLAs for RTO and RPO
- More scalable and flexible
- Easy to monitor
